

YAMAGIWA brings back the H•F Series, first marketed during the 1960s and into the 1970s and now returning after almost 50 years. These fixtures feature a complex interweaving of welded diamond-shaped steel sheets (no screws)—a scrupulous, hand-crafted, lightweight design that effectively hides the bare bulb and delivers glare-free illumination. While the light is on, it produces a complex and delightful interplay of light and shadow. And even when the light is off, the fixture's lovely origami-like geometric design continues its contribution to the living space.

PRODUCT INFORMATION

Size : ϕ 410 x H 373mm
length 700 - 1500mm

Weight : 2.5kg

Material : steel

Light Source :
E27 Incandescent lamp
60W x1

Designer and architect Preben Dal, creator of the of the series's original "Symfoni" model (when working at the Danish company Hans Følsgaard A/S), explained the design concept as follows:

"Our main target in designing lighting fittings is above all, quality in lighting. This idea includes only to a certain degree the outer shape and attractive look of the fitting, but refers rather to the determination of the effects of artificial light, that primarily create good quality , i.e. light in which we feel comfortable. This is what we have in mind with our designs, because it is a human question. However, a lighting fitting makes part of the room, both when the light is switched on and when it is off. Therefore we shall also be pleased with a nice looking and attractive appearance of the fitting during the day.

line-up of original lightings sold in 1980s

YAMAGIWA is actively reviving worthy lighting fixture designs from the past, working from actual fixtures and old drawings to bring back the spirit of bygone creators and techniques. As times change, we shall continue to use our craftsmanship to emulate and revive designs while adapting to changes in lighting statutes and incorporating technological advances.
